

## **2 double doors storage telecommunications rack**

2-post racks vs. 4-post racks The final element to consider when looking at server rack sizes is the rack type. 2-post racks and 4-post racks have an inherent difference in depth.

The doors to the telecommunications rooms must open 180 degrees outward unless restricted by building code. They must be a minimum of 36" wide and 80" high with no door sills.

The current 19-inch rack standard is called EIA-310-E, which is essentially equivalent to IEC-60297-3-100 or DIN 41494 in other regions. (There's also a standard for 23-inch wide telecom ...
